

Chemical Soil Diagnosis by the Universal Soil Testing System: A Revision of Bulletin 392 (Classic Reprint) (Paperback)

By Mont Francis Morgan

Forgotten Books, 2016. Paperback. Condition: New. Language: English . Brand New Book ***** Print on Demand *****. Excerpt from Chemical Soil Diagnosis by the Universal Soil Testing System: A Revision of Bulletin 392 At first thought, the natural solvent to which soils are subjected in nature would seem to be pure water. However, the liquid that bathes the soil particles in a moist soil in the field is more or less charged with carbonic acid, as well as small but significant amounts of various mineral and organic acids, more or less buffered with salts resulting from interaction with the soluble constituents of the soil. The contact of the rootlets and root hairs with the colloidal particles of the soil provides a mechanism for the absorption of chemical elements by plants that can now be explained to a degree as a result of recent expansion of knowledge concerning colloidal interface phenomena. No one artificial solvent, acting upon the soil for a few minutes to a few hours of time, can hope fully to duplicate all the conditions involved in the ability of the soil to provide properly for the chemical nutrition of the crop. Reviews

It is one of my personal favorite books. It is written in easy terms and never hard to understand. It has been designed in an exceedingly easy way and it is only after I finished reading this publication by which in fact changed me, change the way I think.

-- **Lucinda Stiedemann**

This PDF is amazing. I actually have gone through it and that I am sure that I will plan to read it once again in the future. You won't truly feel monotony at any moment of the time (that's what catalogs are for regarding when you request me).

-- **Wellington Connelly**
