Excerpt: . . . son of the owner informed me that the Germans who came there last to open the mine, some years since, tried the water of a spring from the hill side, and found it to contain copper. He gave their mode of trial as follows: Water from the spring was boiled down to a small quantity in an iron kettle; a silver sixpenny piece was then introduced, and taken out coated with copper. Any one acquainted with the relative chemical affinities, knows this to be impossible, as the copper, if any, would be precipitated by the iron of the kettle. Copper would precipitate silver from solution, but silver would not precipitate copper under such circumstances. Some deception must have been practised, if the above statement of the process be correct. Another mine, a silver mine, as it was called, was showed me on the bank...
