

The Direction of the Hair in Animals and Man

By Walter Aubrey Kidd

Theclassics.us, United States, 2013. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can usually download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1903 edition. Excerpt: . CHAPTER III CRITICAL AREAS IN LOWER ANIMALS The following eleven areas will be considered in lower animals: The Naso-frontal, Pectoral, Cervical, Axillary or Post-humeral, Inguinal, Spinal, Extensor Surface of the Ulna, Ventral and Lateral Surfaces of the Abdomen, Extensor Surface of the Thigh, Gluteal, and lastly the Side of the Flank. Naso-frontal. The nasal and frontal regions in diverse animal forms are so different in their relative size, and are so difficult to separate for a study of this kind, that they are here taken as one region. An animal nearly always goes head-foremost through its world, whatever that may be, and its snout meets a variety of opposing objects which cannot but modify the hairy covering. A very active use is also made of the muscles of the nasal region in lifting, turning and twisting the upper lip in such actions as...

Reviews

Very helpful to all of class of folks. This is certainly for all who statte there had not been a worthy of studying. Once you begin to read the book, it is extremely difficult to leave it before concluding.

-- **Jayda Lehner Jr.**

A very amazing publication with perfect and lucid information. We have read through and that i am certain that i will planning to study once more yet again in the future. You will not really feel monotony at anytime of the time (that's what catalogues are for about should you question me).
